AI/ML Enthusiast

Computer Science student focused on Artificial Intelligence and Machine Learning, with programming experience in Java and C++. Practicing Data Structures and Algorithms while exploring Python, AI/ML fundamentals, and full-stack web development. Interested in building practical projects and applying problem-solving skills to real-world challenges.

Technical Skills

Languages	:	Java, C++, Python, SQL
AI/ML	:	Python fundamentals, Machine Learning fundamentals
Development	:	HTML, CSS, JavaScript, React.js, Next.js, TypeScript, Tailwind CSS
Core CS	:	Data Structures and Algorithms, Object Oriented Programming
Dev Tools	:	Visual Studio Code, Git, Github, Postman

Education

Dayananda Sagar College of Engineering — Bengaluru, Karnataka, India
B.Tech in Computer Science — *2025 – 2029*

Projects

TicketPilot – Train Booking Reminder System — *Node.js, JavaScript, node-notifier, Git* — Source Code

- Developed a configurable scheduling service for journey-related reminders with **IST-based scheduling** and Windows notifications.
- Implemented **duplicate-alert prevention, missed-reminder recovery, and activity logging** to improve scheduling reliability.
- Added configurable test mode and Windows startup support, with booking handed off to the official IRCTC website.

Marupaḍe – Campus Lost & Found Platform — *React, TypeScript, Tailwind CSS, Git* — Source Code

- Contributed to a **team-built campus lost-and-found platform** designed to help students report lost items and discover found belongings.
- The platform includes intelligent item matching, ownership-verification workflows, reputation features, and campus analytics.
- Deployed project: Live Demo; original team repository: Original Repository.

Experience

Verseoid — *Chief Technology Officer (CTO) | Startup* — 2026

- Led technical decision-making for a **five-member startup team** building a unified platform to track developer's coding progress across multiple platforms.
- Worked on translating product ideas into implementable features, evaluating engineering trade-offs, and prioritizing development tasks.
- Collaborated with the team on product planning, debugging, and technical coordination while balancing feasibility, complexity, and user value.

Achievements

- **LeetCode:** Solved 200+ problems across Easy, Medium, and Hard difficulties using Java and C++, strengthening data structures, algorithms, and problem-solving skills.
- College Hackathon: Secured 3rd place in a college-level hackathon for the Computer Science branch, collaborating with a team to develop and present a technical solution.
